/note="Organ: Leaf and Root; Vector: pME18S-FL3; Site_1:
Xhoi; Site_2: Xhoi; The library was prepared from polyA+RNA from oxidatively stressed, hydroponically grown sorghum seedlings. At 8 days of age, growth medium was supplemented with hydrogen peroxide to 0.003% and leaves were misted with 10 um methyl viologen. Leaves and roots were harvested at 3, 12 and 27 hr after treatment and all tissue pooled bouble-stranded cDNA was cloned unidirectionally into different DraIII sites of the pME18S-FL3 vector (5-prime DraIII site is CACTGTGTG, 3-prime DraIII site is CACTGTGTG). Thoi excises the cDNA insert."

/note="Oxidatively stressed, hydroponically grown sorghum seedlings. At 8 days of age, growth medium was supplemented with hydrogen peroxide to 0.003% and leaves were misted with 10 um methyl viologen. Leaves and roots were harvested at 3, 12 and 27 hr after treatment and all tissue pooled. Double-stranded cDNA was cloned unidirectionally into different DraIII sites of the pWE18S-FL3 vector (5-prime DraIII site is CACTGGTG, 3-prime DraIII site is CACTGGTG). XhoI excises the cDNA insert."

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & M University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & W University;
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below bred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.

```
a haploid genome (n=7) of approximately 40 Mpp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25X genome coverage. High density colony filters are available upon request."

Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 916 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AUJOLISEL GSS 03-FEB-1999 MAYSOLOSI CUGI Rice Blast BAC Library Magnaporthe grisea genomic Clone mgxb0004B19r, genomic survey sequence.

/note="Vector: parameter of the most devestating thogal baseases
of rice world wide. It is a filamentous ascomycete with
a haploid genome (n=") of approximately 40 Mbp. Rice
blast is an important model fungal pathogen for studying
numerous aspects of the fungal-host interaction. In
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of
kbp was constructed. This library represents greater
than 25x genome coverage. High density colony filters
are available upon request."

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster agenome using these BACs. For further information please see http://www.frutfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isoqenic strain y2; cn bw sp, the same strain used for the BDGP's
blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request."

Rice blast is one of the most devestating fungal diseases
of rice world wide. It is a filamentous ascomycete with
a haploid genome (n=7) of approximately 40 Mbp. Rice
blast is an important model fungal pathogen for studying
numerous aspects of the fungal-host interaction.
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of 130
kbp was constructed. This library represents greater
than 25X genome coverage. High density colony filters
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TGGACTGTTGACCCTCTTGTCGAATATTATATTGTCGACAGTTGGGGCAACTGGCGTCCA 1018

                                                                 presequence (AAQ73997) were incorporated into vectors used for the expression of DNA (see AAT16101) coding for a mature, thermostable xylanase (AAR92053) of Bacillus sp. 720/1. The enzyme can be produced in transformed hosts, pref. Bacillus licheniformis or B. pumilus, for use in the paper-pulp, animal feed and baking industries.                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                        A Bacillus pumilus PTL B12 (ATCC 55443) gene library was screened for recombinant plasmids carrying the xylanase gene. A chromosomal fragment obtained from isolate pBPX1 was subcloned and expressed in Escherichia coli JM109. The sequence of the xylanase gene (as a 1022 bp Sau3AI fragment) carried by a selected transformant is given in AAQ80923
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacillus derived xylanase active over wide pH range - used in treatment of paper pulp, animal feeds and in bakery goods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CATCCATGCCGGGTTAAAGCAGTATCGTTCCATCTAACAGAAAGGNCTGCATGAAAGGA

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The colypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, evelid infections, food poisoning, osteomyelitis, shin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer and production of the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11481 TATGTATAAACGTGAGTGAGTTAGGCGTTCATTGTTCAGTCGTTGGTGGTGCGATAAC 11540
